# **Infection Prevention Basics for Homeless Shelters**

Use as a companion to LACDPH Guideline for Preparation for COVID-19 in Homeless Shelters

# **Education/Signage Educating Staff and Residents:**

- ✓ **Post signs at facility entrance** instructing visitors and shelter guests to alert staff if they have symptoms of respiratory illness (fever, cough etc.).
- ✓ Assess all guests daily and upon entry for symptoms.
- ✓ **Assure shelter guests** that the facility is here to protect them, including answering their questions and explaining what they can do to protect themselves and their fellow guests.
- ✓ Post signs on how to appropriately wear items such as masks, and gloves.

# **Hand Hygiene/ Infection Control:**

- ✓ **Reinforce frequent hand hygiene**: use soap and water for **at least 20 seconds**. If soap and water are not available, use alcohol hand sanitizer that contains at least 60% alcohol.
- ✓ Cover coughs and sneezes with a tissue, and then dispose of the tissue and clean your hands immediately.
- ✓ Provide a facemask for those who are symptomatic and separate from other guests.
- ✓ Have mask and gloves for non-healthcare staff who are working with any guests who are ill.

#### **Cohorting of Shelter Residents:**

- ✓ Designate an area in the shelter for those exhibiting symptoms that is separate from other areas at the shelter; try to set aside a separate dining area and bathrooms that can be exclusively used by those who are ill.
- ✓ Try to assign a dedicated group of staff to support guests who are ill to limit possible exposures and ensure that staff with appropriate training are adhering to precautions.
- ✓ Minimize close contact and the sharing of objects such as cups, food, and drink.

# **Environmental Cleaning:**

- ✓ Routinely clean and disinfect all frequently touched surfaces such as doorknobs, bannisters, countertops, faucet handles, and phones.
- ✓ Provide tissues and no touch receptacles for disposal in restrooms and common areas.
